

Mission, Vision & Values

Greening

Boiler Plate

Greening is a global, vertically integrated renewable energy company that generates, develops and markets its own green energy through multiple technologies: **photovoltaic, wind, biogas and energy storage (BESS)**. With a presence in the major markets of **Europe and North America**, Greening is at the forefront of the energy transition.

Since its listing on **BME Growth in 2023**, Greening has consolidated its position and is preparing to reach **new levels of growth, excellence and transparency**. Our vision is clear: **to lead a greener and more sustainable future**, reducing the global carbon footprint and facilitating the adoption of **clean energy solutions**.

Mission, Vision & Values

Mission:

At Greening, our mission is to be a reference in the global energy revolution through the hybridization of renewable technologies such as photovoltaic, wind, biogas and energy storage (BESS). We are committed to facilitating the transition to a sustainable energy model, providing self-consumption solutions, and generating, developing and commercializing green energy. Our bold and innovative approach enables us to achieve the impossible in our business growth, with the goal of contributing to a more sustainable future and reducing the global carbon footprint.

Vision:

Our vision at Greening is to consolidate our position as a global leader in energy transformation, making renewable solutions the most accessible and efficient option. We operate with a multi-technology and multinational mindset, integrating the entire value chain from project generation and development to sustainable energy commercialization. We aim to simplify the challenges of the energy sector while achieving new levels of technological and operational excellence, creating a work environment where talent and innovation are key drivers of our success.

Values:

“The 3 Bs”

We are a different company, with a unique personality that gives us aspirational values that set us apart and allow us to keep reaching for the impossible.

Be bold. Be dynamic and innovative. Nonconformists to keep doing the impossible to achieve a more sustainable planet full of good energy.

Be Beyond. Be global, multi-technology, multinational and vertically integrated throughout the value chain: from project generation and development to green energy commercialization.

Be Brilliant. Be excellent inside and outside our organization. Provide the best energy to deliver the best customer service and create an environment of excellence that attracts and develops the best talent.
